

SUDDEN DEATH

Myocarditis, Vaccines and Boosters

I would like to bring up a topic which has been going viral around the medical fraternity for quite sometime and it is now becoming more profound and more worrying. We heard about these issues and we used to relate sudden death and myocarditis to vaccines and boosters. There is a simple explanation to this which I would like to suggest.

The spike proteins are toxic proteins which are circulating in most of the vaccinated people and are known to be produced by the mRNA which were introduced through the vaccination process. These spike proteins are being continuously produced in our body all the time and there is no stop button to it. Spike proteins are accumulating daily and it could behave like a time bomb in our body.

What can we do? Many methods of eliminating spike proteins from the body has been suggested but none can be considered as good and effective. This is simply because spike proteins are everywhere in the body including the tissues, and not very high concentration in the blood. So removing it from the body is almost impossible.

I would like to suggest another way of saving ourselves from these dangerous spike proteins. This is to make them useless even though they are in our bodies. We know very well that to exert its effects, spike proteins have to combine with ACE2 receptors and if we can block the ACE2 receptors, spike proteins will be rendered useless and we will be protected. One of the very potent compound that can do this, besides ivermectin, is Thymoquinone.

Thymoquinone is found in abundance in *Nigella sativa* or *Habattus sauda*. I have formulated a product called SATIVApus, from *Habbatusauda*, which is exclusively potent for this purpose. I would like to suggest we take SATIVApus daily as a prophylactic to these disturbing phenomena of myocarditis, sudden death etc. Sativapus is also have hepatoprotective, anti-inflammatory and immune booster effects.

formulation consists of **Habbatus Sauda** (*Nigella sativa*), Vitamin D, Zinc, Magnesium and Monk Fruit.

A Premium product formulated by ProfMUS

A sincere advice from :

Dr. Mustafa Ali Mohd. FASc
Pharmacologist & Toxicologist
Former Professor Faculty of Medicine
University of Malaya
